Skills

Expert in C/C++

Programming Languages

Embedded Systems Expertise

IOT devices Expertise

Software Debugging Expertise

Software Testing Mastery

Software

C/C++

Advanced Systems Engineer with 15+ years of experience in embedded systems (Android/QNX/Yocto) and hardware-software integration. The product type includes Android phone, tablet, 5G MIFI, and Automotive IVI. Proven track record in board bring-up, driver development, and securing mission-critical platforms (Secure Boot, QTEE). Expert in bridging the gap between firmware and physical hardware to ensure peak product performance and reliability

Work History

2024-08 -

Current

Senior Engineer and Platform Team Leader

DesaySV, Taipei City, Taiwan

- Coordinated scrum efforts for 4-person platform team, successfully delivering 100% of software milestones on schedule across 4 concurrent projects while avoiding any critical quality escapes.
- Implemented Google Widevine DRM certificate (WVTS) test solutions for automotive IVI/RSE platforms supporting over 5 major OEMs (Škoda, Tata, Li Auto, Geely, BYD), facilitating secure mass production of more than 300,000 units annually.
- Managed concurrent BSP/Linux kernel driver projects across two platforms (Qualcomm & Telechips) achieving 100% on-time delivery

2020-07 -

2024-08

Advanced Software Engineer

Garmin, Taoyuan City, Taiwan

- Designed secure key storage framework utilized by Toyota for mass-production IVI systems, securing 100% compliance in manufacturing test flows and averting key exposure incidents in the field.
- Developed RSA/XOR-based anti-hacking protections and conducted hardware security validation, reducing potential theft risk by >90% during board bring-up and production.
- Implemented QTEE-based secure TAs protecting key service data, achieving 100% pass rate in security certification testing and zero vulnerabilities in penetration tests.

Bash / Shell Script

Python

2016-11 -
2020-07

Senior Software Engineer

Foxconn Technology Group, New Taipei City

- Directed board bring-up and comprehensive manufacturing test validation for Qualcomm SDX55-based 5G MiFi, achieving first-pass yield exceeding 95%
- Directed peripheral driver validation and production test sequences for smart speakers, increasing production yield by 10-15% and supporting >1 million unit shipments.
- Managed Netflix/HDCP 2.2 certification and security validation, achieving 100% pass rate and accelerating product launch by 2 weeks.

2015-09 -
2016-11

Senior Software Engineer

Leadtek .Inc, New Taipei City

- Developed and validated health kiosk peripherals on MT8127, reducing field failure rate by 20-30% through comprehensive driver and system testing.
- Designed and tested portable ECG wearable with BLE sync and Fourier algorithm, achieving >99% measurement accuracy in production validation.

2015-01 -
2015-09

CMMI Coordinator

Ministry Of Economic Affairs – Automotive Research, Chang-hua, Taiwan

- Conducted an ARM Android embedded system for the automotive industry.
1. Board bring up NXP iMX5 and solving all issues of bootloaders
 2. Build up the Android system in Automotive field in Taiwan.
- Integrated lane departure warning system to the Novatek dashboard camera.

2011-04 -
2013-05

Software Project Manager

Quanta Computer, Taoyuan City, Taiwan

- Implemented touch driver and LVDS display settings, validating power management for NVIDIA Tegra 3 tablet, ensuring 100% customer specification compliance and facilitating mass production ramp-up.

- Coordinated Taiwan and China teams in role as software PM, resulting in 5+ product launches completed on schedule

2009-10 -
2011-04

Software Engineer /Senior Software Engineer

Compal Electronics, Taipei, Taiwan

- Developed factory test mode and drivers (MMC /Touch/ Keypad), enabling 95%+ test in boot loader and engineer mode coverage for Android smartphone production lines.
- Contributed to OTA implementation (cooperate with Redbend software) in Android Cupcake version and partition testing for Kyocera/Acer/Motorola/Lenovo projects, reducing update failure rate to 0%.

Education

2005-09 -
2007-06

Master of Science: Master of Science in Aeronautical Engineering

National Cheng Kung University - Tainan City, Taiwan

- Completed professional development in the Controller Area Network bus for UAV control system (Aileron, Flap, Spoiler and propeller engine control.
- Research an avionic communication system ARINC 429.
- Design CAN bus PCB board (ORCAD) for 8051 controller.

2001-09 -
2005-06

Bachelor of Science: Department of Aerospace Engineering

Tam Kang University - New Taipei City, Taiwan
